Build common adjustments into assessment

Assessment

ASSESSMENT ONE-PAGE PRACTICAL GUIDE

WHAT IS THIS FOR?

Anticipate common disruptions and access needs so students do not have to repeatedly prove that their circumstances are legitimate.

WHY DOES IT MATTER?

Anticipate common disruptions and access needs so students do not have to repeatedly prove that their circumstances are legitimate.

WHAT DOES THIS LOOK LIKE?

Common needs are anticipated in the task design instead of being handled only after individual students ask.

WHAT CAN I DO?

- Identify the extensions, alternatives or access adjustments students request most often.
- Check which can be built into the task without changing the learning outcome.
- Publish flexibility and recovery options before students need them.
- Keep individual adjustment pathways for needs that cannot be met universally.

EXAMPLE IN PRACTICE

A course combines a simple short-extension pathway, an early checkpoint and equivalent format options so common disruptions do not require extensive disclosure.

STARTING POINT TO ADAPT

For the next teaching period, our team will: identify the extensions, alternatives or access adjustments students request most often; check which can be built into the task without changing the learning outcome. We will review student feedback and adjust if needed.
