Design more equitable group work

Assessment

ASSESSMENT ONE-PAGE PRACTICAL GUIDE

WHAT IS THIS FOR?

Structure collaboration so availability, confidence and social familiarity do not decide who succeeds.

WHY DOES IT MATTER?

Structure collaboration so availability, confidence and social familiarity do not decide who succeeds.

WHAT DOES THIS LOOK LIKE?

Roles, expectations, communication and accountability are structured so participation does not depend on confidence, availability or informal social power.

WHAT CAN I DO?

- Make roles, scope and communication expectations explicit.
- Use bounded collaboration windows rather than expecting constant availability.
- Build in a midpoint check and a private escalation route.
- Assess the intended collaborative capability rather than popularity or social polish.

EXAMPLE IN PRACTICE

A team project uses a short group agreement, role planning and midpoint reset to surface workload and communication issues before they become crises.

STARTING POINT TO ADAPT

For the next teaching period, our team will: make roles, scope and communication expectations explicit; use bounded collaboration windows rather than expecting constant availability. We will review student feedback and adjust if needed.
