Curriculum and program design

WHAT IS THIS FOR?

Identify the academic, disciplinary and digital rules students currently have to infer through trial and error.

WHY DOES IT MATTER?

Identify the academic, disciplinary and digital rules students currently have to infer through trial and error.

WHAT DOES THIS LOOK LIKE?

Disciplinary conventions, processes and expectations that experienced students may take for granted are explained and taught.

WHAT CAN I DO?

- List the literacies students need to succeed in the course.
- Identify which are explicitly taught and which are only assumed.
- Add examples, glossaries, worked processes or short explanations at the point of need.
- Sequence literacy development across the program rather than repeating or outsourcing it.

EXAMPLE IN PRACTICE

A program maps how students learn to read evidence, build disciplinary arguments and communicate professionally across each year.

STARTING POINT TO ADAPT

For the next teaching period, our team will: list the literacies students need to succeed in the course; identify which are explicitly taught and which are only assumed. We will review student feedback and adjust if needed.
