Check your learning outcomes

Curriculum and program design

WHAT IS THIS FOR?

Make sure outcomes describe the capabilities students actually need and do not hide unnecessary cultural or disciplinary assumptions.

WHY DOES IT MATTER?

Make sure outcomes describe the capabilities students actually need and do not hide unnecessary cultural or disciplinary assumptions.

WHAT DOES THIS LOOK LIKE?

Learning outcomes describe the capabilities students need without adding unnecessary assumptions about how those capabilities must be expressed.

WHAT CAN I DO?

- Underline the capability each outcome is really asking students to develop.
- Check whether any wording assumes unexplained professional or disciplinary norms.
- Ask whether inclusive or intercultural capability is genuinely part of good practice in the discipline.
- Check that assessment can measure the outcome without requiring irrelevant modes or conventions.

EXAMPLE IN PRACTICE

A program rewrites a vague “professional communication” outcome to specify audience awareness, evidence use and clear explanation, making the capability easier to teach and assess.

STARTING POINT TO ADAPT

For the next teaching period, our team will: underline the capability each outcome is really asking students to develop; check whether any wording assumes unexplained professional or disciplinary norms. We will review student feedback and adjust if needed.
