Proactive accessibility and common adjustments

Have I built common accessibility adjustments in?

ACCESSIBILITY / CURRICULUM

ONE-PAGE TEACHING GUIDE

WHAT IS IT?

Adjustments are available proactively, as part of normal course design, so students can access them without needing to disclose first

WHY DOES IT MATTER?

Accessibility is about usability, not just technical availability. A resource, room or activity can exist while still costing some students far more energy to perceive, navigate, understand or act on. Repeated friction sends a message about who the default user is.

THE STUDENT EXPERIENCE

- “The information exists, but finding and using it takes more effort than learning it.”
- “I have to keep asking for a version I can actually use.”

HOW CAN I DO IT?

- Identify the supports many students may need and design them in from the start.
- Avoid positioning common access routes as exceptional privileges.
- Reduce the amount of personal information students need to provide to participate.

EXAMPLE IN PRACTICE

Recorded lectures, transcripts and downloadable notes are provided routinely rather than only after individual requests.

STARTING POINT TO ADAPT

This course has been designed to build common accessibility adjustments into the course before individual students have to request them.
