Flexible course design

Is there flexibility in course structure and timelines?

EQUITY / CURRICULUM

ONE-PAGE TEACHING GUIDE

WHAT IS IT?

Course structures, support and timelines are designed around realistic student loads, building in flexibility for competing responsibilities

WHY DOES IT MATTER?

The same course requirement can land very differently depending on time, money, care, disability, work, housing or confidence. Equity asks whether students with different lives have a real opportunity to participate and succeed, rather than simply receiving the same rule.

THE STUDENT EXPERIENCE

- “This course assumes university is the only thing happening in my life.”
- “I can technically enrol, but the way this is organised makes participation fragile.”

HOW CAN I DO IT?

- Check the weekly load, not just the total workload.
- Avoid designs that assume long uninterrupted blocks of free time.
- Create part-time and interrupted study pathways that remain coherent and worthwhile.

EXAMPLE IN PRACTICE

A program restructures compulsory workshops into intensive blocks and asynchronous preparation so working students are not required on campus across multiple days.

STARTING POINT TO ADAPT

This course has been designed to design course structure and timelines with enough flexibility to recover from predictable disruptions.
